INTRODUCTION

Governments contract with human service nonprofit organizations to deliver pivotal services to individuals, families, and communities. The U.S. economic recession has depleted many nonprofit budgets while increasing the demand for their services. Many state governments—which are large providers of government contracts and grants—are in a fiscal crisis.¹ As a result, many nonprofits were forced to freeze or reduce salaries, draw on reserves, or scale back their operations.

Each state is faced with unique financial challenges and employs different policies and procedures which are affecting the nonprofit-government contracting relationships in various ways. This report provides state by state data on government contracts and grants with human service nonprofits, problems encountered, and the effect of the recession.

Government contracting problems are widespread at the federal, state, and local levels. Key problems facing nonprofits were identified in this study and include late payments, changes to contracts, complexity of application and reporting requirements, and insufficient payments. Whether these were large or small problems, well over half of all nonprofits experience problems with their contracts and grants.²

Nationwide, nearly 33,000³ human service providers had almost 200,000 government contracts and grants in 2009. Government contracting is more widespread in Arizona, where human service nonprofits averaged six contracts each, than in South Carolina, where nonprofits averaged three contracts each.

The types and sizes of government contracts are as varied as the organizations that receive them. Nationwide, 54 percent of human service nonprofits have government contracts and grants that require matching or sharing of costs. The number ranges from 82 percent of nonprofits in New Hampshire to 37 percent of organizations in Arizona. In addition, many contracts and grants limit the amount of money that can be used for program or organizational administrative costs. In Utah, 78 percent of organizations report limits on program administrative-overhead costs. In North Dakota, only 29 percent report such limits.

¹ Dollars from federal grants often flow through to states and local governments. Examples of federal programs set up as large grants to state and local governments which are then passed through to nonprofits include the Child and Adult Care Food Program (Department of Agriculture) and the Social Services Block Grant (Department of Health and Human Services) (U.S. Government Accountability Office 2009).

² *Grants* and *contracts* are used interchangeably in this report. Definitions are not uniform and often nonprofits cannot differentiate between them. Both contracts and grants refer to formal agreements with governments to produce specified products for a specified payment method.

³ This number is based on a selected group of direct human service providers with budgets greater than \$100,000. See the methodology section for additional details.

Human service nonprofits have been hit hard by the recession. Revenues from major sources such as government and donations have declined, and about 42 percent of human service nonprofits faced a budget deficit in 2009. Half of all organizations froze or reduced employee salaries, and almost 40 percent drew on reserves or reduced staff size. There were notable differences by state; 66 percent of nonprofits in Connecticut froze or reduced salaries but only 24 percent in Arkansas took this action. In Indiana, 62 percent of organizations drew on reserves but just 22 percent did in South Dakota.

This study also identifies key problems with government contracts and grants. The problems include insufficient payments to cover the cost of services provided, complexity of and time required to apply for and report on outcomes of contracts and grants, changes made by governments to existing contracts and grants, and late payments. The results varied significantly by state with some states reporting fewer problems than others. For example, 84 percent of organizations in Rhode Island had problems with payments not covering the full cost of contracted services, compared to just 37 percent of Montana nonprofits. Eighty-three percent of organizations in Illinois reported that late payments were a problem, but only 11 percent of organizations in South Dakota report that late payments were a problem.

The policies, procedures, and budget situations of each state are affecting the nonprofit-government contracting relationships in different ways. This report provides state-by-state data on the government contracting experience in all 50 states and the District of Columbia as well as an overview of the nation. It also includes state rankings for contract limitations, the effects of the recession, and problems experienced by nonprofits with government contracts and grants.

The state profiles provide details on

- the number and types of human service nonprofits.
- the number and source (local, state, federal) of government contracts and grants.
- nonprofits' contracting experience in 2009 compared to prior years.
- key problems facing nonprofits such as late payments, insufficient payments, difficulty with the application or reporting process, and changes to government contacts.
- contract limitations and reporting requirements.
- nonprofits' budget deficits and decreases in revenue during the recession.
- cutbacks human service organizations made in 2009 such as reducing salaries and benefits, reducing staff size, drawing on reserves, and borrowing or expanding lines of credit.

The state rankings provide details on

- the number of human service nonprofits and government contracts.
- nonprofits' contracting experience in 2009 compared to prior years.
- the variations on contract requirements, limitations, and reporting.

- percent of organizations in states hardest hit by the recession and those facing the largest declines in revenue from major sources: local, state, and federal government and donations from individuals, corporations, and private foundations.
- percent of organizations in states experiencing the most problems with their government contracts, including rankings on late payments, changes to government contracts, and insufficient payments.

We hope these state profiles and state rankings will help organizations assess their government contracting experiences and compare their state to other states. States with fewer problems may have policies that can provide clues to more efficient and effective government contracting practices.

The findings reported here are based on a national study of human service nonprofits. A random sample of direct human service providers with more than \$100,000 in expenditures was surveyed. Figures are based on the organizations that completed the questionnaire. All estimates presented here have been weighted to represent the part of the U.S. human service nonprofit sector that had government contracts and grants in 2009. For more details on the study please see the methodology section at the end of this report.

The full report, “Human Service Nonprofits and Government Collaboration: Findings from the 2010 National Survey of Nonprofit Government Contracting and Grants,” and an eight-page brief summarizing the findings, “Contracts and Grants between Human Service Nonprofits and Governments,” can be found on the Urban Institute web site; the full report is available at <http://www.urban.org/url.cfm?ID=412159>.

METHODOLOGY

The data for the state profiles are based on the results of a national survey of human service providers about their contracts and grants with government. The sample of 501(c)(3) human service nonprofits was selected at random from the Urban Institute's National Center for Charitable Statistics (NCCS) files. The sample was limited to organizations that are required to file a Form 990 (an annual financial statement) with the U.S. Internal Revenue Service and had more than \$100,000 in expenditures in 2007—the latest data available at the time the survey was drawn. The human service organizations included in the study were limited to those that provide direct support to children, youth, families, adults, and people with disabilities. Sports and recreation, homeowners associations, labor unions, benevolent associations (fire or police employee groups), farm bureaus, and other select groups were excluded from the study.

The NCCS database consisted of 55,785 human service nonprofits, encompassing crime and legal-related, employment, food and nutrition, housing and shelter, public safety, youth development, multipurpose human service (children and family services, homeless shelters, etc.), and community and economic development organizations. The random stratified sample for this survey contained 9,000 organizations from all 50 states and the District of Columbia. To ensure a representative sample, the list was stratified by region, type of nonprofit, and size of nonprofit. Smaller states were oversampled to ensure adequate sample sizes for making state-level comparisons.

The Social and Economic Sciences Research Center at Washington State University collected the survey data for the Urban Institute. A total of 3,500 nonprofits contacted us with information about the survey. More than 1,000 organizations indicated at the outset of the questionnaire that they had no relationship or dealings with government and did not fill out the rest of the questions. Of the 9,000 organizations surveyed, 2,497 completed the questionnaire, yielding a 36 percent response rate. In addition, 344 respondents that completed the questionnaire did not have government contracts or grants. Consequently, the analysis data file contains a total of 2,497 organizations that completed the questionnaire, 2,153 of which have government contracts and grants. The types and sizes of organizations that participated in the study were not noticeably different from organizations that did not participate. Hence, the potential of nonresponse bias for this study is rather small.

The analysis in this report is limited to the organizations that completed the survey and had government contracts. Each of these organizations was assigned a survey weight to adjust for the disproportionate sampling done to increase the sample sizes in smaller states. All estimates in this report are appropriately weighted and therefore the estimates can be generalized to the sector as a whole. For additional information on the methodology please see the full report at

<http://www.urban.org/url.cfm?ID=412159>.

APPENDIX

2009 GOVERNMENT CONTRACTING EXPERIENCE COMPARED TO PRIOR YEARS

Center on Nonprofits and Philanthropy

The Center on Nonprofits and Philanthropy (CNP) conducts and disseminates research on the role and impact of non-profit organizations and philanthropy. CNP's mission is to promote understanding of civil society and improve nonprofit sector performance through rigorous research, clear analysis, and informed policy.
